This is an open-source tool for offline and security setup users.

This is a password strength checker, means it can suggest and analyze your password. It can help to set an enhance password to ensure the maximum security and privacy protection.

Here's the instruction, how to use it?

Method 1:

Simple but more implementation and increasing the dependencies.

Use the direct source code, .py file.

Simply using these commands to run/use the tool:

For Windows

```
python psc.py    |    py psc.py
```

make sure you're in the same directory where you've saved the .py file. And use from terminal/powershell/cmd

For Linux and Macs

```
python3 psc.py
```

So here's what you'll need if you want to use the tool through running the source code file.

1. Latest Version of Python from Python.org

2. Add it into the PATH

3. Use Terminal to start the tool/program

Method 2:

Easiest and fastest:

Just install the latest release from github repo. And enjoy the tool!
